

NOVA NOTES – ADAPTIVE PLACEMENT PREPARATION & READINESS PLATFORM

REVIEW 2 – EVIDENCE / KEY HIGHLIGHTS

Project Domain	Artificial Intelligence & Machine Learning	Prototype	Core 90% functionality
Focus	Placement Preparation	Review	Review 2

1. WORK COMPLETED

- Defined the placement workflow: Login → Dashboard → Role Selection → Practice → Assessment → Result.
- Validated the prototype flow for signup/login, dashboard, role selection, practice, assessment and progress.
- Defined role-based preparation for Python Developer, Java Developer, Data Analyst, Data Scientist, ML Engineer and Web Developer.
- Designed adaptive preparation using assessment performance and weak-topic identification.

2. ASSESSMENT & EVALUATION

- 15 MCQs + 10 Aptitude + 10 Pseudocode/Output Prediction + 4 Coding = 39 questions/tasks.
- Qualification: $\geq 70\%$ → Qualified; $< 70\%$ → Adaptive Practice & Reattempt.
- Section scores, overall score, qualification status and attempt history support performance tracking.
- Coding and SQL practice evaluate practical placement skills.

3. METHODOLOGY / AI COMPONENTS

- Role Selection → Practice → Assessment → Performance Analysis → Adaptive Reattempt → AI Interview.
- Question randomization, answer evaluation, weak-topic analysis and adaptive recommendation support personalization.
- AI interview: Voice Response → Speech Recognition → LLM Evaluation → Feedback.
- Evaluation factors: Relevance, Correctness, Clarity, Completeness and Professionalism.

4. PROTOTYPE EVIDENCE

- Core 90% prototype demonstrates Login, Dashboard, Role Selection, Practice Session, Assessment and Result/Progress flow.
- The prototype provides the base interface for the complete adaptive placement-readiness platform.

5. EXPECTED OUTPUT

- Assessment Evaluation: Overall Score, Section Scores and Qualification Status.
- Performance Analysis: Weak Topics, Skill Gaps and Attempt History.
- Adaptive Preparation: Targeted Practice, Different Questions and Reattempt.
- Final Output: AI HR Interview Evaluation and Placement Readiness Indicator.

6. KEY LEARNING

- Placement preparation needs role-specific assessment, measurable performance analysis and targeted improvement.
- Correct application states and persistent assessment data are essential for reliable scoring, progress tracking and interview access.

Evidence: Prototype screenshots • Assessment flow • Model explanation • Expected-output flow
